SERVICES  
**SAP**  
PARTNER

Inter Access is an IT service provider with knowledge of pragmatic solutions in the area of complex process chains. For more information, or to make an appointment for a presentation to get to know us better, call + 31 (0) 35 6888400 or send an email to [sap@interaccess.nl](mailto:sap@interaccess.nl).

**SAP Solutions & Process optimisation**

opens

**There is still much to be gained in the area of process optimisation. According to Inter Access, the only justification for an SAP project is that it must result in cost reduction and productivity improvement. Our process chain knowledge exceeds SAP-specific knowledge which results in a broader perspective of improvement proposals. Inter Access is unique in combining (existing) SAP components and non-SAP components for optimal process support.**

Inter Access focuses on complex design and implementation issues related to the configuration and availability of (control) information in environments in which SAP plays a prominent role in application support for corporate processes.

**Enterprise Solutions** Our Enterprise Solutions are aimed at improving process flexibility, process setup and process control.

Inter Access distinguishes three Enterprise Solutions levels:

■ **Enterprise Integration Solutions**

Design, development and implementation of a Service-Oriented Architecture (SOA) aimed at process integration and disclosure, in order to improve process flexibility.

■ **Enterprise Process Solutions**

Optimisation, modelling, design and implementation of process chains such as Order to Cash, Purchase to Pay and Install to Maintain, in order to improve process design.

■ **Enterprise Intelligence Solutions**

Translating internal and external structured and unstructured data into control information by setting up and configuring (trend) analyses, KPIs and dashboards, in order to improve process control.

**Services Portfolio** Our portfolio consists of the SAP Inter View, SAP Inter Action and SAP Inter Facing components.

**SAP Inter View Services** The SAP Inter View services offer various quick scans and analyses aimed at identifying improvement potential in the current situation.

This way, we legitimise recommended adjustments based on the immediate resulting benefits. We apply this to various aspects: user satisfaction and application, being able to get more out of the use/ configuration of the existing SAP system, advice on various proposed (SAP and non-SAP) solutions in relation to the existing SAP system and SAP performance improvements.

**SAP Inter Action Services** Under this name, Inter Access offers 'project services' and 'professional services'. The former involves executing an assignment as a project with the necessary knowledge and skills. Depending on the situation and needs, projects can be executed on a subsequent calculation basis or at a fixed price. 'Professional services' consist of delivering SAP consultancy services based on the available skills.

**SAP Inter Facing Services** The SAP Inter Facing services we offer are essential before an SAP application can go 'live'. The critical success factors are: solidity/reliability of the application and user application/acceptance. Within this framework,

Inter Access provides the essential testing services which allow test sets based on process and application knowledge to be executed and repeated methodically using various tools. In addition, we provide key user educational services. These involve developing (user) documentation and training services.

**Special Expertise Partner**

Inter Access has proven itself to be a leading SAP business partner with various Innovation and Best Certified Partner Awards. Inter Access has the ambition to be the best SAP business partner in a select number of areas of expertise. For you, this results in innovative solutions that exactly meet your specific requirements - due to our broad process expertise.
